## Footnotes:

<sup>1</sup> The boundaries and names of census geographies can change from one census to the next. In order to facilitate data comparisons between censuses, previous census data have been adjusted to reflect as closely as possible the 2021 boundaries of these areas. The methodology used for this adjustment involved spatially linking blocks of previous censuses (concordance to the 1996 Census used the 1996 enumeration areas to the 2021 boundaries). A previous census block was linked to the 2021 area within which its representative point fell. A limited number of interactive linkages were completed to further enhance the adjustment in certain areas. For some census geographies, it was not possible to reflect the 2021 boundaries. The 2021 boundaries may not be reflected as there was no previous census block to assign to the 2021 area. As well previous census data for some 2021 areas may not be available due to the fact that the concordance did not produce an accurate representation of the 2021 area.

<sup>2</sup> Structural type of dwelling 'Structural type' refers to the structural characteristics and/or dwelling configuration, that is, whether the dwelling is a single-detached house, an apartment in a high-rise building, a row house, a mobile home, etc.

<sup>3</sup> Household type Household type refers to the differentiation of households on the basis of whether they are census family households or non census family households. Census family households are those that contain at least one census family. Non census family households are either one person living alone or a group of two or more persons who live together but do not constitute a census family. Census family households may be differentiated based on the presence of additional persons (that is, persons not in a census family).

<sup>4</sup> There is no age restriction on children. Includes children living with a grandparent or grandparents without a parent present.

<sup>5</sup> There is no age restriction on children. Includes children living with a grandparent or grandparents without a parent present.

<sup>6</sup> Multigenerational households represent all households where there is at least one person who is both the grandparent of a person in the household and the parent of another person in the same household. They also represent all households where there is at least one person who is both the child of a person in the household and the grandchild of another person in the same household. In previous censuses, multigenerational households were only created based on the former definition, not the latter. As a result, there may be small differences in counts for 2011 and 2016 in archived tables.

<sup>7</sup> Excludes multigenerational households.

<sup>8</sup> Excludes multigenerational households.
