E : use with caution

Source: Statistics Canada, Canadian Survey on Disability, Table 13-10-0377-01.

Footnotes:

- 2 Age is calculated as of May 10, 2016.
- 3 Data quality indicators are based on the coefficient of variation (CV). They indicate the following: E - Use with caution (CV from 16.6% to 33.3%) and F - Too unreliable to publish (CV greater than 33.3% or sample size is too small to produce reliable estimates).
- 4 Collection took place in 2017 for a sample selected from the 2016 population.
- 5 The sum of the values for each category may differ from the total due to rounding.
- 6 The Canadian Survey on Disability identifies persons with disabilities using the Disability Screening Questions (DSQ), which are based on the social model of disability. The DSQ first measure the degree to which difficulties are experienced across 10 domains of functioning, then ask how often daily activities are limited by these difficulties. Only persons who report a limitation in their day-to-day activities are identified as having a disability. For more detailed information on the DSQ, please see the Canadian Survey on Disability, 2017: Concepts and Methods Guide.
- 7 Refers to whether a person was employed, unemployed or not in the labour force during the week of Sunday, May 1 to Saturday, May 7, 2016.
- 8 The total includes the category "Not specified".
- 9 Refers to persons who, during the week of Sunday, May 1 to Saturday, May 7, 2016, were either employed or unemployed.
- 10 Employed refers to persons who, during the reference period, did any work for pay or profit. This includes those who had a job but were absent from work for reasons such as own illness or disability, personal or family responsibilities, vacation, or labour dispute. It also includes unpaid family work, which is defined as unpaid work contributing directly to the operation of a farm, business or professional practice owned and operated by a related member of the same household.
- 11 Unemployed refers to persons who were available for work during the reference week and who had looked for a job in the previous four weeks; were on temporary layoff during the reference period; or had a new job to start within four weeks from the reference week.
- 12 A note of caution: The percentages displayed in this table for the unemployed do not represent unemployment rates — they are simply the percentage of the total population who are unemployed. The unemployment rate for a particular group (by age, sex or geographic area) is the unemployed in that group, expressed as a percentage of the labour force in that group. To calculate unemployment rates, divide the number of unemployed persons by the number of persons in the labour force (employed persons plus unemployed persons) for the group of interest.
- 13 Not in the labour force refers to persons unwilling or unable to work; that is, they were neither employed nor unemployed.
