Source: Statistics Canada, Canadian Survey on Disability, Table 13-10-0374-01.

Footnotes:

² Age is calculated as of May 10, 2016.

³ Data quality indicators are based on the coefficient of variation (CV). They indicate the following: E - Use with caution (CV from 16.6% to 33.3%) and F - Too unreliable to publish (CV greater than 33.3% or sample size is too small to produce reliable estimates).

⁴ Collection took place in 2017 for a sample selected from the 2016 population.

⁵ The sum of the values for each category may differ from the total due to rounding.

⁶ The Canadian Survey on Disability identifies persons with disabilities using the Disability Screening Questions (DSQ), which are based on the social model of disability. The DSQ first measure the degree to which difficulties are experienced across 10 domains of functioning, then ask how often daily activities are limited by these difficulties. Only persons who report a limitation in their day-to-day activities are identified as having a disability. For more detailed information on the DSQ, please see the Canadian Survey on Disability, 2017: Concepts and Methods Guide.
